ABOUT SAI PRANEETH

Curious analyst. Practical builder.

I connect data engineering discipline, analytical judgment, and product-minded communication to build work people can trust and use.

MY STORY

I like the whole path from raw data to clear action.

As an MS Information Systems and AI candidate at the University of Maryland's Robert H. Smith School of Business, I work across analytics, cloud platforms, automation, and applied AI.

My experience spans production reporting and quality work at MathCo, teaching and research at UMD, and a Microsoft-aligned capstone. Across those settings, the common thread is turning ambiguity into a system: define the question, prepare the data, test the logic, and communicate the result.

I'm especially interested in roles where SQL, Python, data modeling, and stakeholder thinking matter equally.

QUICK FACTS

BASED IN

College Park, Maryland

GRADUATE DEGREE

MS Information Systems & AI · Dec 2026

CORE TOOLS

SQL, Python, BigQuery, Snowflake, Tableau, Power BI

AI STACK

RAG, LangChain, agents, embeddings, Streamlit

OPEN TO

Data analytics, analytics engineering, data engineering, applied AI
